THE 9TH U.S.-CHINA HEALTH SUMMIT
Boston, September 26-27, 2019

Joseph B. Martin Conference Center, Harvard Medical School
<http://www.uschinahealthsummit.org/>

Dear friends:

On behalf of the Summit Organizing Committee, we sincerely thank you for joining us at the 9th U.S.-China Health Summit in Boston!

Since its inauguration in 2011 at Harvard University, the annual U.S.-China Health Summit has taken place alternately in the U.S. and in China. It started and still serves as the major platform for the “meeting of great minds” from these two countries to examine the progress and challenges of healthcare reform. Over the past eight years, the common goal remains unchanged. As the two global giants seek ways to extend access, improve quality, and lower the cost of care for their citizens, we exchange information and good practices on each other’s efforts. Other topics we’ve examined in the past include public health, caring for aging population, precision medicine, mental health, and life course health for women and children.

As the new healthcare reform in China enters its 10th year journey and the Affordable Care Act (ACA) enacted 9 years ago, we come together again to review and discuss existing and emerging new challenges and opportunities. Today, we are also at an important crossroads. While we have seen unprecedented science and technology advancement which have the potential to save millions of lives, we are also facing huge threats to human survival such as global warming, escalated medical costs and socio-economic instability. How to invest in healthcare innovation more effectively and how to build sustainable health care systems are the major themes of the summit this year.

We are inspired by the open dialogue, mutual learning and continuing collaboration among many sectors—ranging from thought leaders, traditional and emerging industry leaders, financial investors, healthcare providers and insurance payers from both countries—as we engage in a whole day of discussions on science, innovation, technology, IP protection, service delivery and payment models.

Healthcare is a basic human right. We strongly believe that this “meeting of innovative minds” will benefit not only the two great countries but also the rest of the world. We hope you all enjoy the talks and panel discussions, meeting old friends and building new networks. We also encourage you to continue to engage and support the ongoing dialogue and collaboration for the sake of a better, healthier and more sustainable world!

Jing Ma, MD, Ph.D.

President & Secretary-General
U.S.-China Health Summit
Director, China Program for Health
Innovation and Transformation
Department of Population Medicine
